

ART385 Design Document for Interaction Design

Document Info

DJ, ART385, Project 3 Secret Agent, Due April 30, 2020

What is it? Without Restating the exact assignment (as in previous Weeklies), tell me what you are planning to make!

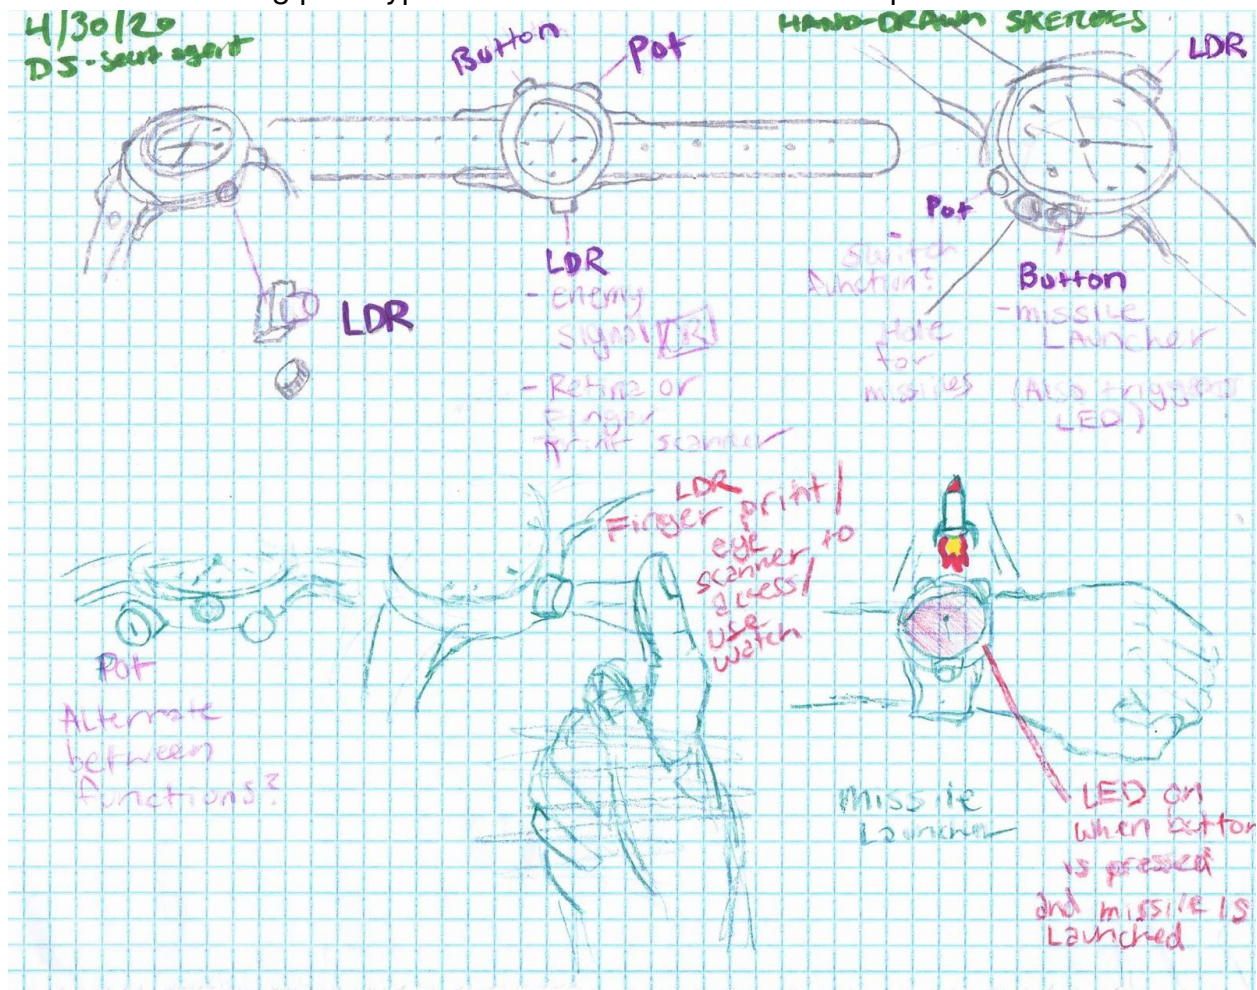

I am planning to make a watch-looking gadget for secret agents that they can use for special-ops missions. This watch will be able to launch miniature missiles, spikes, grappling hook, and make phone calls. You will be able to also scan your fingerprint or retina to gain access to its secret agent functions.

Audience

My intended audience is secret agents that will need this gadget for special missions. I have yet to develop a fictitious mission this watch could be used for.

Hand-drawn sketches

These are preliminary or in-progress sketches of your Imaginary Prototype. What is the final device or interaction going to look like? Interested in seeing: evolution of original ideas into a working prototype. Please do these first and then proceed with the code.

Interaction Diagram (Interface Design)

How will people interact with your prototype? Which simulated controls? (e.g. potentiometer, LDR, etc.) will we be using? What will they be mapped to in real life
